Dialogue & Discourse
Submissions for regular issue 14:2

Call for Papers

It is our pleasure to announce the call for submissions for the next regular issue of the journal Dialogue and Discourse. Submissions are invited on all topics in the formal, computational, or psycholinguistic study of dialogue and discourse.

Submissions received by September 1st, 2023 will be considered for the next regular issue. Later submissions will be slated for the next available issue.

Dialogue and Discourse (D&D) is the first peer-reviewed free open access journal dedicated exclusively to work that deals with language "beyond the sentence". The journal adopts an interdisciplinary perspective, accepting work from Linguistics, Computer Science, Psychology, Sociology, Philosophy, and other associated fields with an interest in formally, technically, empirically or experimentally rigorous approaches. Descriptive papers should make a substantial theoretical contribution to be considered. We are committed to ensuring the highest editorial standards and rigorous peer-review of all submissions, while granting open access to all interested readers. D&D has published regular issues every year since 2010, and occasionally special issues on common topics.

As of July 2023, D&D has published 112 papers, and the journal's h-index is 28. D&D is endorsed by ACL SIGdial, ACL SemDial, and AMLaP. D&D is indexed by Scopus and the European Reference Index for the Humanities and Social Sciences.

Submissions are made via the online submission system (see link at this website). Authors are required to indicate if a submission is an extended version of one or more previously published conference papers (to which we would expect substantial additions); simultaneous submission to another venue is prohibited. Submissions will undergo rigorous peer-review. Once accepted and finalized, papers will appear online immediately, as part of the current issue. Selected papers will furthermore be offered the opportunity to present a poster at the following SIGDIAL Conference.

Note: there is also an open call (until October 1st) for a special issue on Embodied Conversational Systems in Human-Robot Interaction on this website.
(Guest Editors: Dimitra Gkatzia, Carl Strathearn, Mary-Ellen Foster, Hendrik Buschmeier)
